Final Year B. Tech Information Technology W.E.F. 2024-25*

Information Technology Department

Department Vision

To be a frontier in Information Technology, to produce globally competent engineers with an aptitude for leadership and research, who will be instrumental in continuous socio-economic development.

Department Mission

M1: To impart quality education in Information Technology in accordance with the needs of the society through blended mode.

M2: To inculcate critical thinking and creativity for identifying various issues and to provide sustainable solutions by becoming a lifelong learner.

M3: To enhance career opportunities through academia-industry interaction and research, while embodying professional ethics.

Information Technology

Under Graduate Program

Program Educational Objectives (PEOs)

1. Graduates will exhibit strong fundamental knowledge and skills in the field of Information Technology to pursue successful professional careers , higher studies and research.
2. Graduates will exhibit capabilities to understand and resolve the various issues through their problem solving skills.
3. Graduates will be sensitive to ethical, societal and environmental issues while serving at their professional work and society.

Program Outcomes (POs)

The program outcomes of B. Tech. Information Technology Program are summarized as following:

1. **Engineering Knowledge** :Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
2. **Problem Analysis**: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences and engineering sciences.
3. **Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
4. **Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
5. **Modern Tool Usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

6. **The Engineer and Society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities, relevant to the professional engineering practice.
7. **Environment and Sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
8. **Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
9. **Individual and Team Work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
10. **Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
11. **Project Management and Finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
12. **Life-long Learning:** Recognize the need for, and have the preparation and ability to engage in independent and lifelong learning in the broadest context of technological change.

Program Specific Outcomes (PSOs)

1. Students will be able to apply fundamentals of mathematics, algorithms and computational systems to Information technology.
2. Students will be able to provide a solution to the problem in the areas of Networking, Database management, System Software, Web Technology, Information Security and Thrust areas.
3. Students will be able to design and develop IT solution for societal problem/s while encouraging usage of Free and Open Source Software (FOSS)

21ITU4HD1T : MATHEMATICS FOR DATA SCIENCE

Teaching Scheme

Lecture: 3 Hours /Week, 3 Credits

Tutorial: 1 Hours /Week, 1 Credits

ICA -25 Marks

Examination Scheme

ESE – 60 Marks

ISE – 40 Marks

Introduction:

Data science is a field of study and application that has been growing rapidly for the past several decades. As a growing field, it is gaining a lot of attention in both the media as well as in the jobmarket. This course introduces the fundamentals of mathematics which are used by data scientists to solve the real time problems.

Prerequisite: Basics of Linear algebra, Probability, Statistics

COURSE OUTCOMES:

Students will be able to:

1. Use the properties of Linear Maps in solving problems on Linear Algebra.
2. Build a strong statistical foundation and learn how to ‘infer’ insights from a huge population using a small sample.
3. Demonstrate various random variables, discrete and continuous distributions and their usage.
4. Use optimization techniques and formulate hypotheses for a population to solve real-life business problems.

SECTION-I

Unit 1–Basics of Data Science:

(04)

Introduction to data science, Typology of problems; Importance of linear algebra, statistics and optimization from a data science perspective, Structured thinking for solving data science problems.

Unit 2–Linear Algebra

(10)

Vectors, Matrices and their properties (determinants, traces, rank, nullity, etc.); Eigen values and eigenvectors; Matrix factorizations; Inner products; Distance measures; Projections; Notion of hyper planes; half-planes.

Unit 3- Statistics

(08)

Describing a Single Set of Data, Central Tendencies, Dispersion, Correlation, Simpson’s Paradox, Correlation & causation.

SECTION-II

Unit 4 – Probability

(08)

Dependence and Independence, Conditional Probability, Bayes’s Theorem, Random Variables Continuous Distributions, The Normal Distribution, The Central Limit Theorem.

Unit 5- Hypothesis and Inference**(06)**

Statistical Hypothesis Testing, Confidence Intervals, P- hacking, Bayesian Inference

Unit 6: Optimization**(08)**

Unconstraint optimization ,necessary and sufficiency conditions for optima, gradient descent methods, constraint optimization, KKT condition, Introduction to non-gradient techniques, Introduction to least squares optimization, Optimization view of machine learning,

Internal Continuous Assessment (ICA):

ICA should consist of Solving 8- 10 assignments on above units.

Text Books :

1. Data Science from Scratch: First Principles with Python, Joel Grus, O'Reilly Media
2. David G. Luenberger (1969), Optimization by Vector Space Methods, John Wiley & Sons(NY).
3. G. Strang (2016). Introduction to Linear Algebra, Wellesley-Cambridge Press, Fifth edition,USA.

3. Cathy O'Neil and Rachel Schutt (2013). Doing Data Science, O'Reilly Media
4. Data Sciences, Jain V.K., Khanna Publishing House, Delhi

Walchand Institute of Technology, Solapur

Honors Degree in Data Science

T.Y. B. Tech. (Information Technology), Semester - V

21ITU5HD2T : DATA PRE-PROCESSING AND VISUALIZATION

Teaching Scheme

Lecture: 3 Hours /Week, 3 Credits
Practical :2 Hours /Week, 1 Credits
ICA -25 Marks

Examination Scheme

ESE- 60 Marks
ISE – 40 Marks

Introduction:

Data science is a field of study and application that has been growing rapidly for the past several decades. As a growing field, it is gaining a lot of attention in both the media as well as in the job market. This course will introduce students to data pre-processing and visualization techniques and tools.

Prerequisite:

Fundamentals of Python Programming

COURSE OUTCOMES:

At the end of this course, the student will be able to -

1. Identify the different types of data
2. Transform raw data into understandable format
3. Use python libraries for data pre processing and visualization
4. Represent the data in various graphical forms.

SECTION - I

Unit 1 - Introduction and Describing Data (6)

Overview, Sources of Data ,Process for Making Sense of Data, Observations and Variable , Types of Variables, Central Tendency, Distribution of the Data, Confidence Intervals, Hypothesis Tests

Unit 2 - Preparing Data Tables (8)

Overview, Cleaning the Data, Removing Observations and Variables, Generating Consistent Scales Across Variables, New Frequency Distribution, Converting Text to Numbers, Converting Continuous Data to Categories, Combining Variables, Generating Groups, Preparing Unstructured, Data Visualizing Relationships between Variables, Calculating Metrics about Relationships.

Unit 3 - Introduction to NumPy (8)

Understanding Data Types in Python, The Basics of NumPy Arrays, Computation on NumPy Arrays: Universal Functions, Aggregations: Min, Max, and Everything in Between, Computation on Arrays: Broadcasting, Comparisons, Masks, and Boolean Logic, Fancy Indexing ,Sorting Arrays, Structured Data: NumPy's Structured Arrays

SECTION-II

Unit 4 - Data Manipulation with Pandas (7)

Installing and Using Pandas, Introducing Pandas Objects, Data Indexing and Selection, Operating on Data in Pandas, Handling Missing Data, Hierarchical Indexing, Combining Datasets: Concat and Append, Combining Datasets: Merge and Join, Aggregation and Grouping, Pivot Tables, Vectorized String Operations, Working with Time Series, High-Performance Pandas.

Unit 5 - Data Visualization (6)

Overview, Visualization Design Principles, Tables, Univariate Data Visualization, Multivariate Data Visualization, Visualizing Groups, Dynamic Techniques

Unit 6 - Visualization with Matplotlib and Seaborn (9)

General Matplotlib Tips, Two Interfaces for the Price of One, Simple Line Plots, Visualizing Errors, Density and Contour Plots, Histograms, Binnings, and Density, Customizing Plot Legends, Customizing Colorbars, Multiple Subplots, Text and Annotation, Customizing Matplotlib: Configurations and Stylesheets, Three-Dimensional Plotting in Matplotlib, Geographic Data with Basemap, Introduction to Seaborn: Seaborn functionalities and usage, Spatial Visualizations and Analysis in Python with Folium, Case Study.

Internal Continuous Assessment (ICA):

ICA should consist of Solving 8- 10 practical assignments on above units.

Text Book:

1. Glenn J. Myatt, Making sense of Data: A practical Guide to Exploratory Data Analysis and Data Mining, John Wiley Publishers, 2014. (Unit- I and II)
2. Glenn J. Myatt, Making sense of Data: A practical Guide to Data Visualization, Advanced Data Mining Methods and Applications, John Wiley Publishers, 2009.(Unit-V)
3. Python Data Science Handbook – Essential Tools for working with Data : Jake VanderPlas, O’rielly (Unit III, IV, VI)

Walchand Institute of Technology, Solapur

Honors Degree in Data Science

T.Y. B. Tech. (Information Technology), Semester - VI

21ITU6HD3T : MACHINE LEARNING

Teaching Scheme

Lecture: 3 Hours /Week, 3 Credits

Practical: 2 Hours /Week, 1 Credit

ICA - 25 Marks

Examination Scheme

ESE – 60 Marks

ISE – 40 Marks

Introduction :

Machine learning is the science of getting computers to act without being explicitly programmed. This course provides a broad introduction to machine learning and its mathematical foundation. It includes the types and the best practices in machine learning along with its real world applications.

Pre-requisite:

Knowledge of Probability & Statistics with a basic course in Python.

COURSE OUTCOMES:

At the end of the course students will be able to

1. Demonstrate types of machine learning algorithms.
2. Design a model by selecting appropriate machine learning algorithm for a given problem.
3. Validate designed machine learning model.
4. Evaluate and tune machine learning model based on various parameters.
5. Design various applications using machine learning algorithm.

SECTION I

Unit 1: Introduction to Machine learning

(08)

Understanding Machine Learning: What Is Machine Learning?, Leveraging the Power of Machine Learning, The Roles of Statistics and Data Mining with Machine Learning, Putting Machine Learning in Context, Types of machine Learning, Applications of Machine Learning. Applying Machine Learning: Getting Started with a Strategy, Applying Machine Learning to Business Needs, Understanding Machine Learning Techniques, Tying Machine Learning Methods to Outcomes.

Unit 2: Offerings of Machine learning

(05)

Looking Inside Machine Learning: The Impact of Machine Learning on Applications, Data Preparation, The Machine Learning Cycle.

Getting Started with Machine Learning: Understanding How Machine Learning Can Help, Focus on the Business Problem, Requirement of Collaboration in Machine Learning, Executing a Pilot Project, Determining the Best Learning Model.

Unit 3: Basic mathematics for Machine Learning

(10)

Getting Started with The Math Basics, Working with Data, Exploring the World of Probabilities, Describing the Use of Statistics, Interpreting Learning As Optimization, Exploring Cost Functions, Descending the Error Curve, Updating by Mini-Batch and Online.

SECTION II

Unit 4: Validating Machine Learning Models (10)

Validating Machine Learning: Checking Out-of-Sample Errors, Getting to Know the Limits of Bias, Keeping Model Complexity in Mind and Solutions Balanced, Training, Validating, and Testing, Resorting to Cross-Validation. Looking for Alternatives in Validation. Optimizing Cross-Validation Choices, Avoiding Sample Bias and Leakage Traps, Discovering the Incredible Perceptron

Simplest learning strategies to learn from Data: Discovering the Incredible Perceptron, Growing Greedy Classification Trees, Taking a Probabilistic Turn

Unit 5: Improving Machine Learning Models (08)

Improving Machine Learning Models, Studying Learning Curves, Using Cross-Validation Correctly, Choosing the Right Error or Score Metric, Searching for the Best Hyper-Parameters, Testing Multiple Models, Averaging Models, Stacking Models, Applying Feature Engineering, Selecting Features and Examples, Looking for More Data.

Unit 6: Applications of Machine Learning (04)

Applying Learning to Real Problems, Classifying Images, Scoring Opinions and Sentiments, Recommending Products and Movies, Using Machine Learning to Provide Solutions to Business Problems, Future of Machine Learning.

Internal Continuous Assessment (ICA):

Student should implement the following:

1. Basic mathematics for Machine Learning –
Simulating solutions using Python to
 - I. Matrix operations
 - II. Problems using Probability
 - III. Statistical Estimations.
2. Introduction to Jupyter Notebook and Colab.
3. Working with data.
4. Data Exploration and Preprocessing.
5. Linear Regression
6. Introduction to Dimensionality Reduction
7. Logistic Regression
8. Decision Trees
9. Ensemble Models
10. Clustering (Unsupervised Learning)

Text Books:

1. Machine Learning For Dummies, IBM Limited Edition by Judith Hurwitz, Daniel Kirsch (Published by Wiley, First edition).
2. Machine Learning For Dummies by John Paul Mueller, Luca Massaron (Published by For Dummies; First edition).

Reference Books :

1. Introduction to Machine Learning (Second Edition) by Ethem Alpaydm (published by The MIT Press Cambridge, Massachusetts London, England
2. Machine Learning by Tom M. Mitchell (Publisher: McGraw Hill Education; First edition + New Chapters from Second edition).

21ITU7HD4T : PREDICTIVE ANALYTICS

Teaching Scheme

Lecture: 3 Hours /Week, 3 Credits

Practical: 2 Hours /Week, 1 Credit

ICA - 25 Marks

Examination Scheme

ESE – 60 Marks

ISE – 40 Marks

Introduction:

Predictive Analytics aims to build computational abilities, inferential thinking, and practical skills for tackling core data scientific challenges and how predictive analytics tools can be used to analyze real-life business problems such as Retail analytics, financial data, and healthcare data analytics. The focus will be on case-based practical problem-solving using predictive analytics techniques to interpret model outputs.

Prerequisite:

Before proceeding with this course, students should have an understanding of the basic mathematical modeling, linear algebra, statistical analysis and programming.

COURSE OUTCOMES:

1. Recognize challenges in dealing with data sets in domains such as finance, risk and healthcare.
2. Identify real-world applications of machine learning in domains such as finance, risk and healthcare.
3. Identify and apply appropriate algorithms for analyzing the data for variety of problems in finance, risk and healthcare.

SECTION - I

Unit 1 - Retail Analytics

(7)

Understanding Customer: Profiling and Segmentation, Modeling Churn, Modeling Lifetime Value, Modeling Risk, Market Basket Analysis.

Unit 2 - Risk Analytics

(8)

Risk Management and Operational Hedging: An Overview, Supply Chain Risk Management, Bayesian Framework for Supply Chain Risk Management, Credit Scoring and Bankruptcy Prediction

Unit 3 - Financial Data Analytics

(6)

Financial News analytics: Framework, techniques, and metrics, News events impact market sentiment, Relating news analytics to stock returns

SECTION-II

Unit 4 - Financial Time Series Analytics (8)

Financial Time Series and Their Characteristics, Common Financial Time Series models, Autoregressive models, Markov chain models, Time series models with leading indicators, Long term forecasting

Unit 5 - Introduction Healthcare Analytics (7)

An Introduction to Healthcare Data Analytics, Electronic Health Records, Privacy-Preserving Data Publishing Methods in Healthcare, Clinical Decision Support Systems

Unit 6 - Healthcare Data Analytics (7)

Natural Language Processing and Data Mining for Clinical Text: Core NLP Components, Information Extraction and Named Entity Recognition, Social Media Analytics for Healthcare: Tracking of Infectious Disease Outbreaks, Readmission risk Prediction

Internal Continuous Assessment (ICA):

ICA should consist of Solving 8- 10 practical assignments on above units.

Text Books:

1. Olivia Parr Rud “Data Mining Cookbook: Modeling Data for Marketing, Risk, and Customer Relationship Management”, Wiley, 2001.
 2. Chandan K. Reddy, Charu C. Aggarwal "Healthcare Data Analytics", CRC Press, 2015.

21ITU7HD5P : MINI PROJECT

Teaching Scheme

Practical: 4 Hours/Week, 2 Credits

Examination Scheme

POE – 50 Marks

ICA - 50 Marks

Introduction :

Project based learning is a paradigm which is becoming time-honored now a days. To keep abreast with this, Project course is included in the curriculum which is spread over both semesters of final year. For this course, students carry out a project as a team that allows them to demonstrate their abilities and to develop skills within their chosen area of interest. Hardware realization as well software projects with focus on design, development and research aspects are accepted. Also communicating effectively, both in oral and written form are an important skill for engineering graduates in many different contexts. This course also aims to foster these skills.

COURSE OUTCOMES :

1. Analyze technological alternatives for developing IT solution with relevance to environment and sustainability.
 2. Explore state-of-art tools and FOSS alternatives to develop solutions meeting societal and professional needs.
 3. Develop a system through Software Development Life Cycle.
 4. Demonstrate ability to engage in teamwork while observing professional ethics.
 5. Write and present a well organized project report
 6. Inculcate habit of self study and lifelong learning.
-
