24ETU3MD6T: Multidisciplinary Minor I – Fundamentals of Electronic Circuits

| Teaching Scheme | | Examination Scheme | |
|--------------------|--------------|--------------------|----------|
| Lectures | 2 Hours/week | ESE | 60 Marks |
| Practical/Tutorial | - | ISE | 40 Marks |
| Credits | 2 | ICA | - |

Introduction:

Understanding basic electronics is fundamental for any electronic product design. This course provides students with a solid foundation in electronic components, sensors, actuators, and basic circuit principles, essential for designing and troubleshooting electronic systems.

Course Prerequisite:

This course requires knowledge of basic engineering mathematics and basic electronics engineering

Course Objectives:

1. Explain the function and characteristics of basic electronic components.
2. Demonstrate the principles of Kirchhoff's Voltage and Current Laws (KVL, KCL) in circuit analysis.
3. Analyze and design simple RLC circuits.
4. Introduce sensors and actuators and their applications in electronic systems.

Course Outcomes:

At the end of the course, students will be able to:

1. Identify and describe the function of various electronic components.
2. Apply KVL and KCL to analyze basic circuits.
3. Design and analyze RLC circuits.
4. Integrate sensors and actuators in simple electronic systems.

Introduction:

This course introduces students to the fundamentals of electronic circuit design and the tools and techniques used to create and prototype electronic circuits. It emphasizes hands-on learning through the use of design software.

Course Prerequisite:

This course requires knowledge of basic engineering mathematics and fundamentals of electronics components and electronic circuits.

Course Objectives:

1. Teach the fundamentals of electronic circuit design.
2. Familiarize students with design software tools like Altium, KiCad, or Eagle.
3. Demonstrate the process of creating prototypes.
4. Integrate design principles with practical prototyping skills.

Course Outcomes:

At the end of the course, students will be able to:

1. Design basic electronic circuits.
2. Use software tools to create electronic circuit designs.
3. Prototype electronic circuits using appropriate methods.
4. Evaluate and troubleshoot prototypes for design improvements.

Introduction:

Embedded systems are central to modern electronic products. This course provides an introduction to embedded systems with a focus on popular platforms like Arduino, Raspberry Pi, and Espressif.

Course Prerequisite:

This course requires knowledge of basic analog and digital electronics, basic understanding of C language

Course Objectives:

1. Introduce the concept and applications of embedded systems.
2. Familiarize students with Arduino, Raspberry Pi, and Espressif platforms.
3. Teach basic programming and interfacing techniques for embedded systems.
4. Demonstrate the integration of hardware and software in embedded projects.

Course Outcomes:

At the end of the course, students will be able to:

1. Describe the basics of embedded systems and their applications.
2. Program and interface with Arduino, Raspberry Pi, and Espressif.
3. Develop simple embedded projects.
4. Integrate hardware and software components in embedded systems.

Introduction:

Effective communication techniques are crucial for modern electronic product design, especially in IoT applications. This course covers communication protocols and software design necessary for implementing communication in electronic systems.

Course Prerequisite:

This course requires knowledge of basic electronics, basic understanding of analog and digital signal, basic engineering mathematics

Course Objectives:

1. Introduce fundamental communication techniques and protocols.
2. Teach the principles of data transmission and reception.
3. Familiarize students with communication protocols for IoT.
4. Demonstrate software design for communication systems.

Course Outcomes:

At the end of the course, students will be able to:

1. Describe various communication techniques and protocols.
2. Implement basic data transmission and reception methods.
3. Utilize communication protocols in IoT applications.
4. Design software for effective communication in electronic systems.

Final Year B.Tech. (Multidisciplinary Minor in E&TC Engineering), Semester-VII

24ETU7MD6T: Multidisciplinary Minor V – Enclosure and Communication Design for IoT

| Teaching Scheme | | Examination Scheme | |
|--------------------|--------------|--------------------|----------|
| Lectures | 3 Hours/week | ESE | 60 Marks |
| Practical/Tutorial | 1 Hour/week | ISE | 40 Marks |
| Credits | 4 | ICA | 25 Marks |

Introduction:

This course combines the principles of enclosure design and communication techniques essential for IoT applications. Students will learn to design physical enclosures considering aesthetics, usability, and manufacturability while also gaining knowledge of communication protocols necessary for IoT devices.

Course Prerequisite:

This course requires knowledge of basic electronics, embedded and IoT systems, digital modulation techniques.

Course Objectives:

1. Introduce principles of IoT enclosure design emphasizing functionality, aesthetics, and manufacturability.
2. Teach fundamental wireless communication technologies and protocols for IoT applications.
3. Integrate enclosure design with communication systems to optimize performance and usability.
4. Implement communication protocols effectively in IoT applications, focusing on reliability and efficiency.

Course Outcomes:

At the end of the course, students will be able to:

1. Design functional, aesthetically pleasing enclosures for IoT devices.
2. Apply wireless communication technologies and protocols essential for IoT connectivity.
3. Integrate usability and manufacturability principles into enclosure design to enhance product quality.
4. Implement and optimize communication protocols for efficient data exchange in IoT applications.
